

TAHOE MODEL WORKS

HO SCALE

50 TON DALMAN 2-LEVEL TRUCKS

Our trucks feature one-piece black acetal plastic mouldings with separate brake shoe detail, and non-magnetic, insulated metal RP-25 contour wheelsets. Trucks are also available with "semi-scale" (.088" wide) wheels.

Many freight cars built in the 1920s were equipped with Dalman trucks. The Dalman 2-level truck design used additional springs to give a smoother ride. Railroads using this version include Chesapeake and Ohio, Chicago Great Western, Illinois Terminal, L&N, Milwaukee Road, M-K-T, Nashville Chattanooga and St. Louis, Pere Marquette, and many Texaco 10,000 gallon tank cars.
